

STUDENT RESULT MANAGEMENT SYSTEM

The Student Result Management System is a web-based application designed to streamline the process of managing and recording students academic results. The project aims to automate semester results management. as it is a system for the management of computerized test results of student examination records. By analysing the result status and applying the standard calculation followed by the University the result are displayed with individual scores and the equivalent percentage. A program designed for students whose rights have been granted to students to read and practice their results by providing usernames and passwords for secure access. The full results system will be under the control of the administrator or admin and the administrator or admin has full access to write, read, and show the result. The guide or admin also grants Teacher and students access and guest user access rights. The reader can share or publish his or her result.
